

# Flowchart

---

- Program has an array of 20 words one of the words is chosen at random
- You are given 10 lives
- You must enter a letter
- The system checks if the letter is in the word and also checks if it has already been entered or not
- The system prints out the letters that were wrong and prints out the letters that are right in the word
- Life is lost by entering a wrong letter and when lives get to 0 the system asks do you want to play again
- If you do not the program ends
