Worked example

4

An exercise

What is a flowchart?

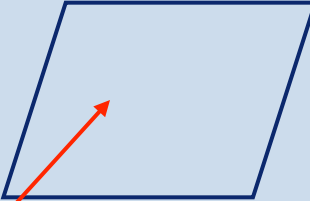

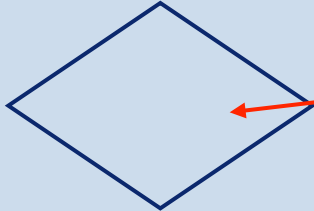

❖ A **flowchart** is a graphical diagram which can be used to represent an algorithm

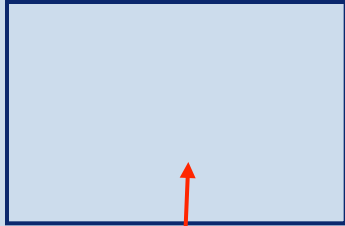

Symbols

Terminal → 

Input/Output
Operation → 

Decision ← 

Process → 

What is pseudocode?

- ❖ **Pseudocode** is a readable description of what an algorithm should do, which can be implemented in any language

Structured English and Pseudocode

Structured English

```
PROGRAM PrintNumber:  
    Read in a number and  
    print it out.  
END.
```

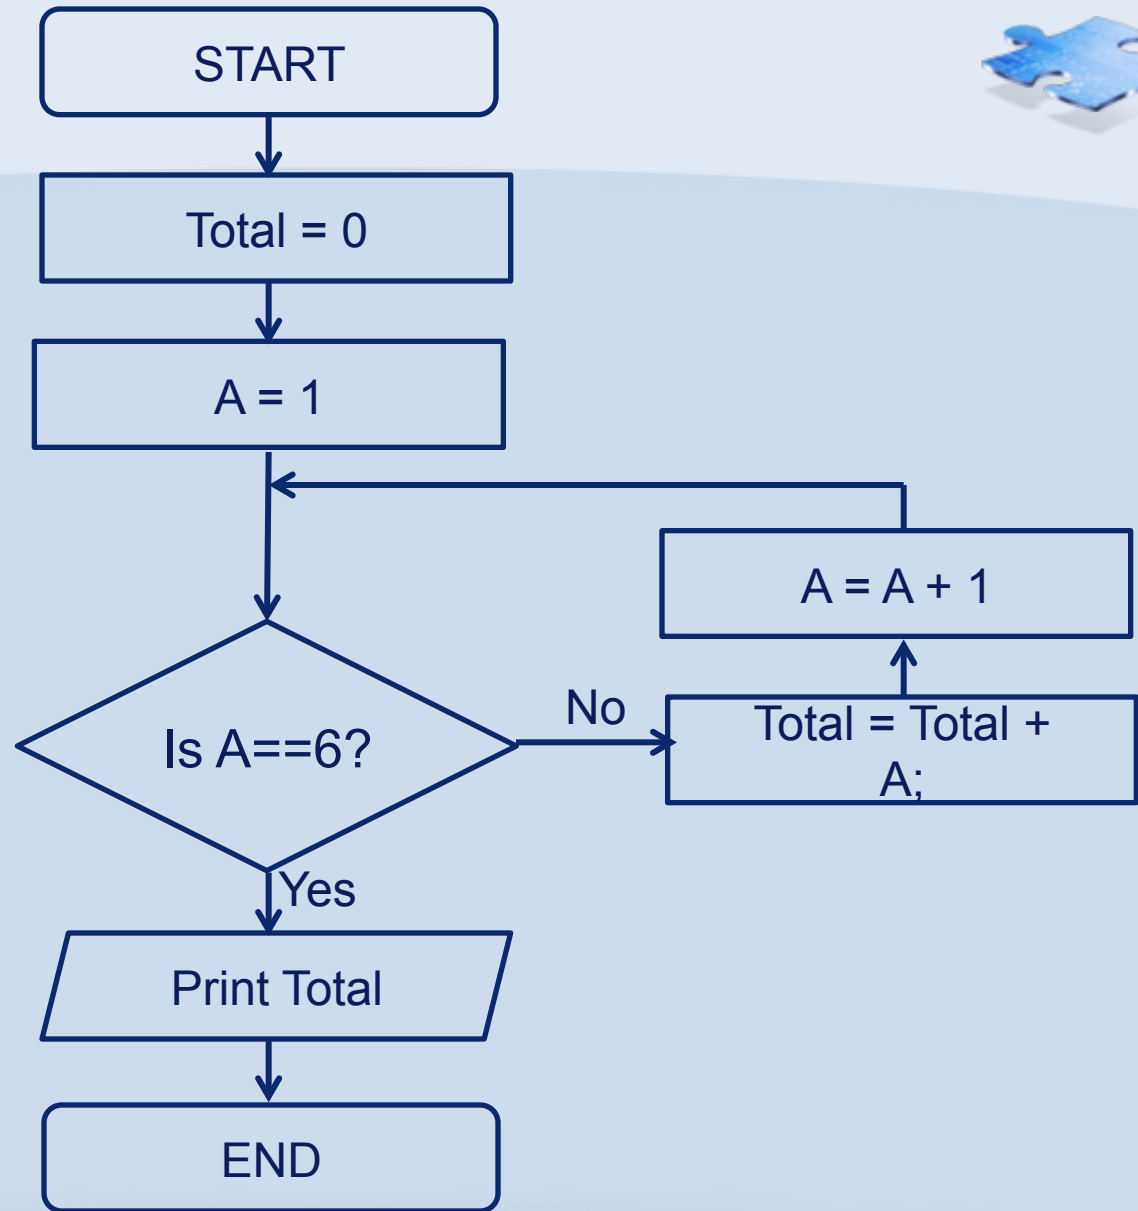

Pseudocode

```
PROGRAM PrintNumber:  
    Read A  
    Print A  
END.
```

An exercise

- ❖ Write the following algorithm in both pseudo code and a flowchart:
 - Print the sum of the following numbers -1...5

Structured English and Pseudocode

Structured English

```
PROGRAM PrintSum1to5:  
    Keep adding the  
    numbers from 1 to 5.  
END.
```

Pseudocode

```
PROGRAM PrintSum1to5:  
    Total = 0  
    A = 1  
    WHILE (A NOT EQUAL TO  
        6) DO  
        Total = Total + A  
        A = A + 1  
    ENDWHILE  
    Print Total  
END.
```

More exercises

- ❖ Alter the previous algorithm so that it calculates the sum of the numbers 1 to 100 but include only multiples of three or five in the sum e.g., 3, 5, 6, 9, 10.
- ❖ Given a list of positive numbers return the largest number in the list.

A group exercise

- ❖ In groups of 4, take a case study, draw a flowchart, and matching pseudocode
- ❖ Assign yourself roles (as stated on the handout)
- ❖ Take a photo of flowchart & pseudocode and upload to Twitter (one per group)

Thank You !
